KHIE — KENTUCKY HEALTH INFORMATION EXCHANGE

Achieving Transitions of Care with KHIE's Platinum Service

Kentucky providers can now use KHIE's Platinum service to achieve Meaningful Use Transitions of Care

How it works:

For each patient that is transitioned to another care setting, the referring provider electronically submits the summary of care record (C-CDA) to KHIE. KHIE stores the C-CDA in its repository and sends an acknowledgement back to the referring provider's EHR. The referring provider notifies the receiving provider that the C-CDA is available for query from KHIE. The receiving provider queries KHIE and views and/or retrieves the C-CDA. In order to count the transition of care for Meaningful Use, the referring provider is responsible for ensuring with "reasonable certainty" that the receiving provider electronically viewed the C-CDA stored in KHIE's repository.

What KHIE needs:

- Both referring provider and all receiving providers must be KHIE participants
- Referring provider must be live on KHIE with Platinum service
- In order to retrieve C-CDAs from KHIE, each receiving provider must either be: 1) live on KHIE with Platinum service, or 2) be able to query KHIE using KHIE's Community Health Record

How "reasonable certainty" is achieved:

KHIE's role

KHIE will send an electronic acknowledgement back to the referring provider's EHR for each C-CDA received

Referring provider's role

⇒ Notify the receiving provider when the C-CDA is available in KHIE
⇒ Generate a report from within their EHR documenting the number of C-CDAs that were successfully contributed to KHIE
⇒ Retain a copy of the EHR report along with documentation proving that the receiving provider was notified
